

STUDENT RECORD MANAGEMENT APP

A Report Submitted The Department of

INFORMATION TECHNOLOGY

and

ARTIFICIAL INTELLIGENCE & DATA SCIENCE

By

M. VENGABABU(21KB5A3006)

G. SAKETH REDDY (20KB1A3012)

J. SUNIL (20KB1A3014)

Under the esteemed guidance of

Mr. M. SIVAPRATAP REDDY

ASSISTANT PROFESSOR

DEPARTMENT OF IT and AI&DS

N.B.K.R INSTITUTE OF SCIENCE & TECHNOLOGY

(Autonomous)

VIDYANAGAR – 524 413, TIRUPATI DIST, AP

Website: www.nbkrist.org.

Ph: 08624-228 247

Email: ist@nbkrist.org.

Fax: 08624-228 257

N.B.K.R. INSTITUTE OF SCIENCE & TECHNOLOGY

(Autonomous)

(Approved by AICTE: Accredited by NBA: Affiliated to JNTUA, Ananthapuramu)

An ISO 9001-2000 Certified Institution

Vidyanagar -524 413, Tirupati District, Andhra Pradesh, India

BONAFIDE CERTIFICATE

This is to certify that the project work entitled “**STUDENT RECORD MANAGEMENT SYSTEM APP**” is a bonafide work done by M.VENGABABU, G.SAKETH REDDY, J.SUNIL in the department of **INFORMATION TECHNOLOGY AND ARTIFICIAL INTELLIGENCE & DATA SCIENCE, N.B.K.R Institute of Science & Technology, Vidyanagar** and is submitted to department of IT and AI&DS. This work has been carried out under my supervision.

Mr. M .SIVAPRATAP REDDY

Assistant Professor

Department of IT and AI&DS

N.B.K.R.I.S.T

Dr. A. NARAYANA RAO

Professor & HOD

Department of IT and AI&DS

N.B.K.R.I.S.T

Acknowledgement

We wish to express my gratitude to those who extended their valuable co-operation and contribution towards the project.

We would like to express my gratitude to Correspondent of institution **Mr. N. Ram Kumar Reddy**.

A special thanks to Director of the Institution **Dr. V. Vijaya Kumar Reddy** for permitting and encouraging for doing this project

We would also like to express gratitude to **Dr. A. Narayana Rao**, Head of the department of **IT and AI&DS** of **N B K R Institution of Science and Technology**, Vidyanagar for facilitating this project and providing his guidance throughout the duration of the project.

We would like to thank my project guide **Mr. M. Sivapratap Reddy** for his valuable time and continued assistance for the successful completion of the project.

we express our thanks to other professors, classmates, friends and non- teaching staff who have helped us for the completion of our project and without infinite love and patience this would never have been possible.

We would like to thank one and all who have helped us directly and indirectly to complete this project successfully.

Problem statement

The existing manual system of managing student records in educational institutions is time-consuming, error-prone, and lacks efficiency. The process of maintaining and retrieving student information, such as personal details, academic performance, attendance, and disciplinary records, is cumbersome and often leads to inaccuracies and delays. Additionally, the manual system makes it challenging to generate comprehensive reports, track student progress, and communicate effectively with parents or guardians.

Therefore, there is a need for a Student Record Management System that automates and streamlines the process of storing, managing, and accessing student information. This system should provide a centralized database to store all relevant data securely, enable easy data entry and retrieval, facilitate efficient report generation, and support effective communication between the educational institution, students, and parents/guardians. The system should also have appropriate access controls and user permissions to ensure data privacy and security.

By addressing these challenges, the student Record management system aims to enhance the overall efficiency, accuracy, and productivity of managing student records, improving the educational institution's administrative process and providing a better experience for students and staff members.

Executive summary

Introduction:

The Student Record Management System (SRMS) is a comprehensive software solution designed to streamline and automate the management of student records in educational institutions. It offers an efficient and secure platform for recording, storing, and retrieving student information, resulting in improved administrative processes and enhanced data accuracy. This executive summary provides an overview of the key features, benefits, and potential impact of implementing the SRMS in an educational institution.

Key Features:

Centralized Database: The SRMS provides a centralized database to store and manage student records, including personal information, academic performance, attendance, and disciplinary records. This eliminates the need for manual record-keeping and minimizes the chances of data duplication or loss.

User-Friendly Interface: The system offers a user-friendly interface that enables administrators, teachers, and staff to easily navigate and input/update student information. It reduces the learning curve for new users and facilitates efficient data entry and retrieval processes.

Academic Performance Management: The system allows teachers to record and manage students' academic performance, including grades, assessments, and progress reports. It generates report cards automatically, saving time and effort for teachers, and provides timely access to performance data for parents and students.

Communication and Collaboration: The SRMS facilitates effective communication and collaboration among stakeholders, including teachers, students, parents, and administrators. It provides a messaging system, event notifications, and online portals for parents to access their child's records, enabling seamless information sharing and enhancing parental engagement.

CHAPTER 1

Introduction

In today's rapidly evolving educational landscape, the efficient management of student records is crucial for educational institutions. Student record management encompasses the process of collecting, organizing, storing, and retrieving student information, including personal details, academic performance, attendance records, and disciplinary history. The traditional manual methods of managing these records are outdated, cumbersome, and error-prone. As a result, educational institutions are increasingly turning to technology-driven solutions, such as Student Record Management Systems, to streamline and automate these processes.

The Student Record Management System is a comprehensive software application designed to handle the diverse and complex aspects of student data management. It provides a centralized database that allows educational institutions to store, manage, and access student information efficiently. This system eliminates the need for manual record-keeping and significantly reduces the administrative burden on staff members, enabling them to focus more on core educational activities.

The primary objective of implementing a Student Record Management System is to improve the overall efficiency, accuracy, and productivity of managing student records. By digitizing and automating the record-keeping process, institutions can minimize human errors, reduce paperwork, and enhance data integrity. Moreover, the system provides quick and easy access to student records, enabling staff members to retrieve information promptly and make informed decisions.

One of the key advantages of a Student Record Management System is the ability to generate comprehensive reports and analytics. Educational institutions can leverage this feature to extract meaningful insights from student data, such as academic performance trends, attendance patterns, and demographic information. These insights can inform data-driven decision-making processes, enabling institutions to identify areas for improvement, implement targeted interventions, and enhance student outcomes.

Additionally, a well-designed Student Record Management System facilitates effective communication between educational institutions, students, and parents or guardians. The system can send automated notifications regarding important updates, such as examination schedules, assignment deadlines, or parent-teacher meetings.

Data security and privacy are paramount considerations when implementing a Student Record Management System. The system should have robust access controls, ensuring that only authorized personnel can view or modify sensitive student information. It should comply with data protection regulations and employ encryption techniques to safeguard data integrity and prevent unauthorized access or breaches.

In conclusion, a Student Record Management System is an indispensable tool for educational institutions seeking to streamline their administrative processes and enhance student record management. By digitizing student records, automating data entry and retrieval, generating comprehensive reports, and facilitating effective communication, these systems significantly improve operational efficiency, data accuracy, and overall productivity. Educational institutions that embrace technology-driven solutions for student record management are better equipped to meet the evolving demands of the educational landscape and provide a seamless experience for students, parents or guardians, and staff members.

1.1 Components used in student record management system

A Student Record Management System typically consists of several components that work together to provide a comprehensive solution for managing student records. The specific components may vary depending on the system's design and implementation, but here are some common components found in such systems:

1. **Database:** The database component serves as the central repository for storing student information. It includes tables and fields to store data such as student demographics, academic performance, attendance records, disciplinary history, and contact information.
2. **User Interface:** The user interface component allows authorized users, such as administrators, teachers, and parents or guardians, to interact with the system. It provides a graphical interface through which users can perform actions like data entry, data retrieval, report generation, and communication.
3. **Authentication and Access Control:** This component ensures that only authorized users can access and manipulate student records. It includes features like login screens, password management, and user role management to enforce security and privacy measures.
4. **Data Entry Module:** The data entry module enables users to input and update student information. It typically includes forms or templates for entering data related to personal details, academic records, attendance, and others

5. **Data Retrieval and Search:** This component allows users to search and retrieve specific student records based on various criteria, such as student ID, name, grade level, or enrollment year. It may include advanced search capabilities and filtering options to facilitate quick and efficient data retrieval.
6. **Reporting and Analytics:** The reporting and analytics component enables users to generate comprehensive reports and analyze student data. It may include pre-defined report templates for common queries, as well as custom report generation options. This component allows educational institutions to track student performance, identify trends, and generate insights for informed decision-making.
7. **Communication and Notifications:** This component facilitates communication between educational institutions, students, and parents or guardians. It may include features such as automated email notifications, messaging systems, and portals where parents or guardians can access student information and receive updates on academic progress, attendance, and important announcements.

1.2 OBJECTIVES:

The objectives of a Student Record Management System are as follows:

1. **Efficient Data Management:** The primary objective of a Student Record Management System is to streamline the process of managing student records. It aims to replace manual record-keeping methods with an automated system that can efficiently store, organize, and retrieve student information. By eliminating paperwork and reducing administrative tasks, the system improves operational efficiency and saves time for educational institutions.
2. **Accurate and Reliable Data:** Another objective is to ensure the accuracy and reliability of student data. Manual record-keeping is prone to errors and inconsistencies, leading to data inaccuracies. A Student Record Management System enforces data validation checks and provides standardized data entry formats, minimizing errors and improving data integrity. This ensures that the student records are reliable and up-to-date.
3. **Easy Data Retrieval:** The system aims to facilitate quick and easy retrieval of student information. Users can search for specific student records based on various criteria, such as student ID, name, or enrollment year. This objective helps staff members retrieve the required information promptly, saving time and improving overall productivity.

4. **Comprehensive Reporting:** A Student Record Management System enables the generation of comprehensive reports and analytics. This objective helps educational institutions analyze student data and generate meaningful insights. Reports can include information on academic performance, attendance records, disciplinary history, and demographic trends. These reports assist in data-driven decision-making processes, identifying areas for improvement, and monitoring student progress.

1.3 Scope of student record management system:

The scope of a Student Record Management System encompasses the range of functionalities and features it offers, as well as the extent of its application within an educational institution. The scope typically includes the following aspects:

1. **Student Data Management:** The system covers the management of various student data, including personal information (such as name, address, contact details), demographic details, enrollment history, academic records (grades, courses taken, class schedules), attendance records, disciplinary records, and any other relevant information related to students.
2. **User Roles and Permissions:** The system defines different user roles and permissions to ensure appropriate access and security. It allows administrators, teachers, parents or guardians, and other authorized personnel to perform specific actions and access relevant student information based on their roles and permissions.
3. **Data Entry and Maintenance:** The system provides data entry forms or interfaces for authorized users to input and update student information. It includes validation checks to ensure data accuracy and integrity. The system also enables the maintenance of records by allowing updates, corrections, and additions as needed.

CHAPTER 2

SYSTEM SPECIFICATION

2.1 HARDWARE & SOFTWARE REQUIREMENTS

2.1.1 H/W Configuration:

1. Processor : I5/intel processor
2. Disk space : 10 GB
3. RAM : 8 GB
4. Display : 1280*800 pixels

2.1.2 S/W Configuration:

1. Operating system : windows 10/11
2. IDE : Android Studio
3. Libraries Used : SQLITE.
4. Technology : Java, XML.

2.2 ARCHITECTURE

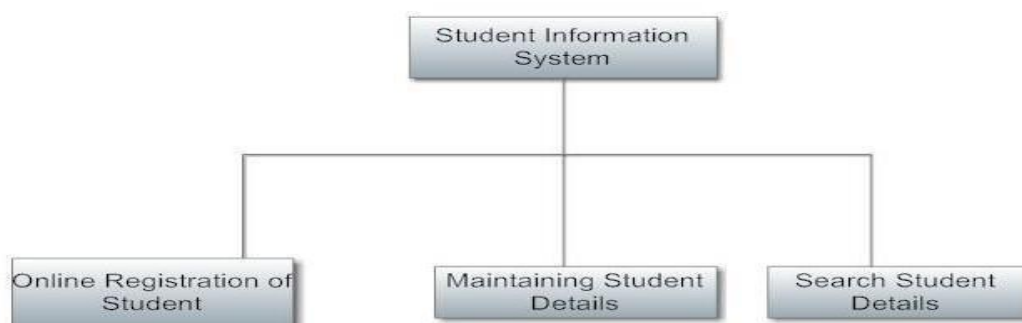

Fig: Architecture

2.3 SOFTWARE INSTALLATION FOR ANDROID STUDIO

Download:

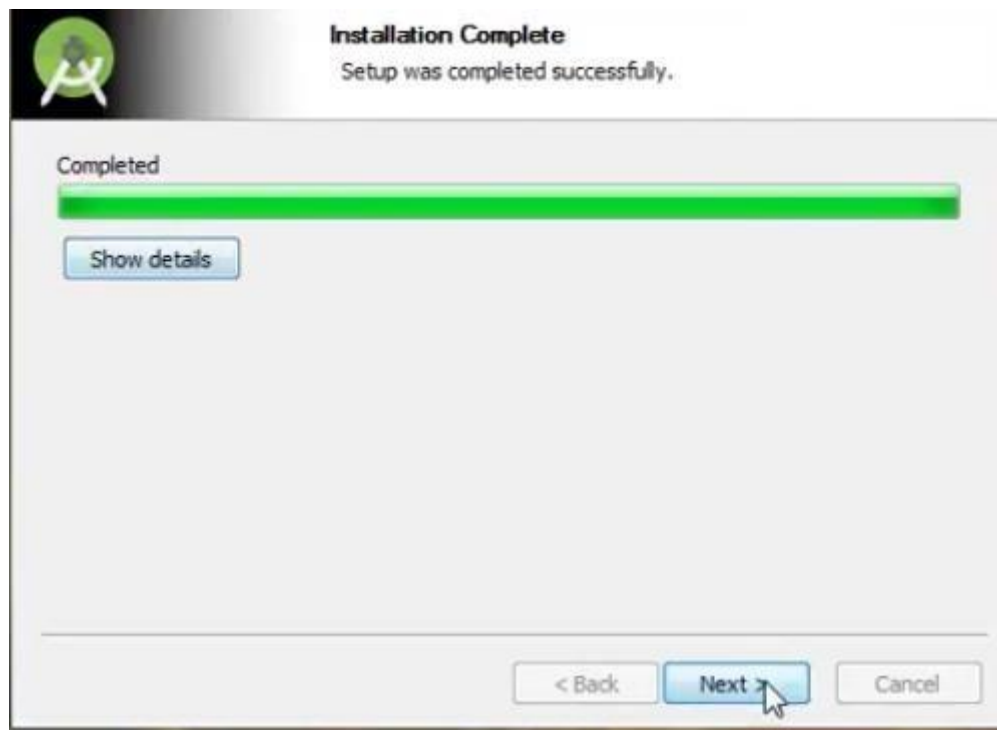

1. Open any web browser and navigate to the Android Studio download page.
2. Click Download Android Studio. The Terms and Conditions page with the Android Studio License Agreement opens.
3. Read the License Agreement.
4. At the bottom of the page, if you agree with the terms and conditions, select the I have read and agree with the above terms and conditions checkbox.
5. Click Download Android Studio to start the download.
6. When prompted, save the file to a location where you can easily locate it, such as the Downloads folder.
7. Wait for the download to complete.

Install:

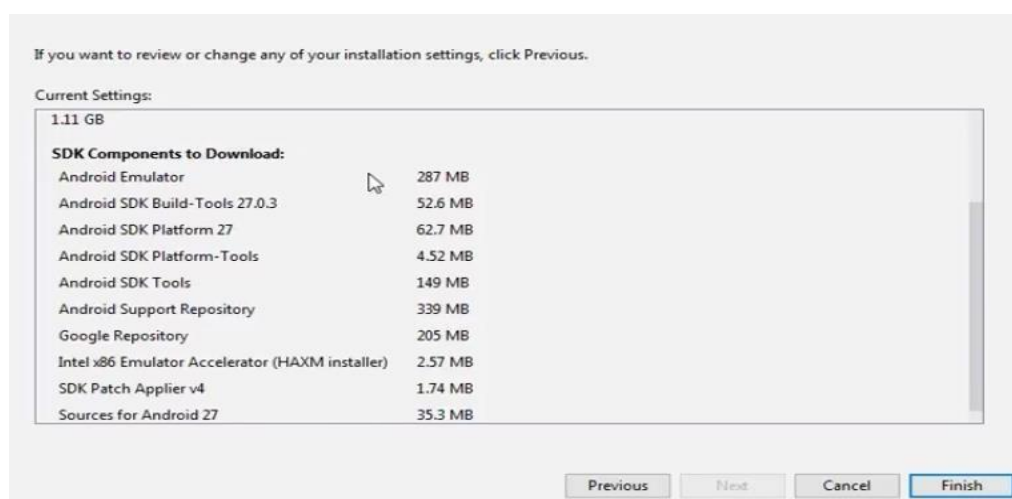

1. Open the folder where you downloaded and saved the Android Studio installation file.
2. Double-click the downloaded file.
3. If you see a User Account Control dialog about allowing the installation to make changes to your computer, click Yes to confirm the installation.
4. After the downloading has finished, open the file from downloads and run it. It will prompt the following dialog box. Click on next. In the next prompt, it'll ask for a path for installation. Choose a path and hit next.

5. It will start the installation, and once it is completed, it will be like the image shown below. Click on next.

6. Once “Finish” is clicked, it will ask whether the previous settings need to be imported [if the android studio had been installed earlier], or not. It is better to choose the ‘Don’t import Settings option’. Click ok.
7. This will start the Android Studio.
8. Now it is time to download the SDK components.

9. Click on to finish. The installation will be completed

CHAPTER 5

CONCLUSION

In conclusion, the student record management system is an essential tool for educational institutions to efficiently manage and organize student information. This documentation has provided a comprehensive overview of the system's features, including student registration, enrollment, attendance tracking, and grade management. The system's user-friendly interface and intuitive design aim to streamline administrative tasks, save time, and enhance data accuracy. It emphasizes the importance of data security and privacy, highlighting measures such as role-based access control and data encryption. Furthermore, the documentation outlines the system's scalability, extensibility, and integration capabilities, enabling seamless integration with other educational systems and services. Overall, the student record management system documentation serves as a valuable resource for administrators, teachers, and staff, empowering them to effectively manage student records and support the educational process.
